

A leading national provider of Senior Care advances their compliance, efficiency and cost structure with BeFree.

A CASE STUDY

A Background

Our client, a franchisee business of Home Instead Senior Care, a specialist in providing In-home care to ageing adults and their families across Australia, faced challenges in processing accounts payable and receivable on time.

This, coupled with the complexity involved in receiving the subsidy from the regulatory authorities would demand a lot of their efforts and focus.

Time and efforts spent in managing their internal finance and accounting functions that often detracted them from what they do best, providing the care.

How BeFree helped?

Combining our deep industry expertise with automation, we leveraged the transformation framework, an ecosystem of intelligent technologies and our global delivery model to re-engineer and streamline their internal finance and accounting function.

A glimpse into our services
